DETAILED ACTION

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: The prior art fails to disclose an apparatus for controllably generating sparks comprising an combination at least two output stages connected to a spark generating device, means for charging the energy storage devices and at least partially isolating the energy storage device of each output stage from the energy storage devices of the other output stages and logic circuit connected to the controlled switches of the at least two output stages for selectively triggering the output stages to transfer their stored energy to the spark generating device to generate a spark, as recited in the independent claim, so that the energy level and the profile over time of an energy pulse used to generate sparks at the spark generating device can be electronically adjusted to suit any given application. Thus, the examiner has allowed claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Wilmot et al., Patent No. 5,592,118, "Ignition exciter circuit with thyristors having high DI/DT and high voltage blockage".

Art Unit: 2821

Smith et al., Patent No. 5,347,422, "Apparatus and method for an ignition system".

Kirk, Jr. et al., Patent No. 4,149,508, « Electronic ignition system exhibiting efficient energy usage".

None of the above patents discloses the recited arrangement of the at least two output stages and the logic circuit.
